Sub :- 10T

ASSIGNMENT : 5

(1) What is greenfield of IOT, compare it with brownfield IOT.

Ans:- In IOT, greenfield development refers to all these shiny new gadgets and device that come with internet connectivity.

- Meanwhile, the true future of IOT is an ecosystem of connected devices that can autonomously inter-communicate (M2M) without human intervention and create value for the community.

* compare it with brownfield IOT.

- Green field projects are those where everything connect with project, from identifying the site to the development plan, auxiliary or adjacent projects, support services, etc are all to be done from the scratch.

- Brown field projects are those where the preliminary development of the site, identification of the actual business to be carried out, etc are already done and the investor comes in with the required expertise and funds and kickstarts the project.
